Description

The 74AUP1T97 is a universal configurable 2−input logic gate that provides single supply voltage level translation. This device is designed for applications with inputs switching levels that accept 1.8 V low voltage CMOS signals while operating from either a single 2.5 V or 3.3 V supply voltage. The 74AUP1T97 is an ideal low power solution for mixed voltage signal applications especially for battery−powered portable applications. This product guarantees very low static and dynamic power consumption across entire voltage range. All inputs are implemented with hysteresis to allow for slower transition input signals and better switching noise immunity.

The 74AUP1T97 provides for multiple functions as determined by various configurations of the three inputs. The potential logic functions provided are MUX, AND, NAND, OR, and NOR, inverter and buffer. Refer to Figures 3 to 9.

Features

- Single Supply Voltage Translator
  - 1.8 V to 3.3 V Input at V_{CC} = 3.3 V
  - 1.8 V to 2.5 V Input at V_{CC} = 2.5 V
- 2.3 V to 3.6 V V_{CC} Supply Voltage Operation
- 3.6 V Over−Voltage Tolerant I/O's at V_{CC} from 2.3 V to 3.6 V
- Power−Off High−Impedance Inputs and Outputs
- Low Static Power Consumption
  - I_{CC} = 0.9 μA Maximum
- Low Dynamic Power Consumption
  - C_{PD} = 2.7 pF Typical at 3.3 V
- Ultra−Small MicroPak™ Packages

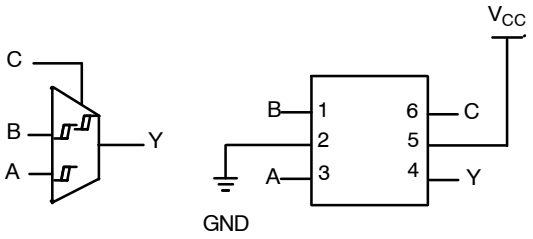
Logic Configurations

Figure 3 through Figure 9 show the logical functions that can be implemented using the 74AUP1T97. The diagrams show the DeMorgan's equivalent logic duals for a given two−input function. The logical implementation is next to the board−level physical implementation of how the pins of the function should be connected.



Note:
1. When C is L, Y = B.
2. When C is H, Y = A.
