### **DESCRIPTION:**

The FCT257T is a high-speed quad 2-input multiplexer built using an advanced dual metal CMOS technology. Four bits of data from two sources can be selected using the common select input. The four buffered outputs present the selected data in the true (non-inverting) form.

The FCT257T has a common Output Enable  $(\overline{OE})$  input. When  $\overline{OE}$  is high, all outputs are switched to a high-impedance state tloying the outputs to interface directly with outputs oriented systems.

#### NOTES:

- 1. Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability. No terminal voltage may exceed Vcc by +0.5V unless otherwise noted.
- 2. Inputs and Vcc terminals only.
- 3. Output and I/O terminals only.
